MEMORANDUM FOR RECORD

SUBJECT: Medical chart review of SSG Anastasha A Clarke (1087) DOB: 12/18/1987 for evidence of cognitive impairments.

1. Past medical history: SSG Clarke was noted to have a history of witnessed seizures first noted in the medical record while in theater on 13 Sep 2011 where she experienced reported tonic-clonic seizure activity. She suffered additional seizures after failing to follow up with her neurologist for refills of her anti-seizure medication. These subsequent seizures were suspected to be psychogenic non-epileptic seizures since they correlated with the dates that the soldier was expected to take her PT test. SSG Clarke had another seizure while taking a PT test on 10 May 2016 and was brought to the emergency room. She had a follow up appointment with MAJ Menon 16 May 2016, where she was referred to neurology and TBI clinic and placed on a medical profile that recommended against driving until neurology work up was complete.
2. Upstate Emergency Department Report 21 May 2016: SSG Clarke arrived to the emergency department after a motorcycle accident where she was reportedly traveling at over 100 mph. According to the medical records from the emergency room, there were no results found for restricted substances.
3. Assessment: SSG Clarke did not regain consciousness during her treatment in the emergency room or during her subsequent hospital admission. She was reported to have sustained diffuse axonal injury with a poor prognosis for return to previous level of functioning. SSG Clarke is currently enrolled in the Shepherd Center for spinal cord and brain injury rehabilitation. She has yet to gain consciousness according to the most recent report (Date: 27 July 2016).
4. POC for this memorandum is CPT Anthony J Heidt at anthony.j.heidt.mil@mail.mil or 315-772-5587.
